chown   (version 2025-05-10)

USAGE

  sys chown,fname,ownerid

DESCRIPTION

Chown will change the owner of the file name pointed at by 'fname'.
Ownerid is a 16 bit user-id value.

When the user-id of the caller is 0 (system/root), it can set the new
owner anyway.

When the user-id of the caller matches the owner-id of the file, it can
set the new owner. If the _new_ owner is 0 (system/root) all execute bits
are stripped for the file.

DIAGNOSTICS

An error is returned if the user-id of the caller is not the owner-id of
the file and the user-id of the caller is not 0 (system/root) in this
case.
